

Mount Ida Campus Greenhouse Gas, Clean Energy, and Sustainability Planning

Created by the UMass Amherst Clean Energy Corps

Presentation Order:

- 1 Introduction
- 2 Project Background
- 3 Emissions and Energy Analysis
- 4 Recommendations
Buildings, Transportation, Sustainability
- 5 Working with Newton
- 6 Next Steps
- 7 Conclusion and Questions

Mount Ida Campus Map

Introduction:

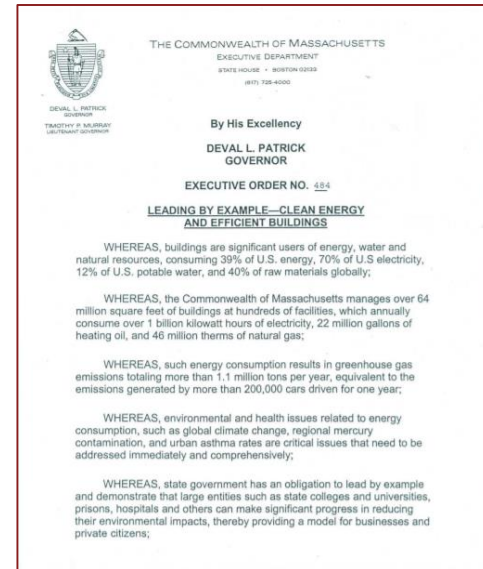

- Who are we?
 - CEE Interns interested in clean energy, emissions reduction and efficiency

- Project start: Jan 2019

Project Background:

- UMass Amherst purchased Mt. Ida College on May 17, 2018
- “Leading By Example” requires UMass to report and reduce its greenhouse gas emissions
- The UMass Commitment to Sustainability
- Going carbon neutral
- Significant increase to UMass emissions

AASHE STARS Rating:

- Academics: Curriculum, Research
- Engagement: **Campus & Public**
- **Operations: Air & Climate, Buildings, Energy**
- Food & Dining, Grounds, Purchasing,
- **Transportation**, Waste, Water
- Planning & Administration:
Coordination & Planning,
- Diversity & Affordability, Investment &
Finance, Wellbeing & Work
- Innovation & Leadership

- Focusing on Aspects of the STARS

Rating:

- Building Operations
- Emissions
- Efficiency
- Green Transportation
- Sustainability

Our Goals:

1. Establish foundational energy and GHG emissions reporting data
2. Identify focus areas and provide recommendations for low-cost energy efficiency
3. Model possible deep-energy retrofit applications for high EUI/oil burning buildings
4. Review transportation options and current fleet vehicles and then provide options for increased efficiency
5. Provide an updateable building by building index and interactive GIS map to bring together all the sources of data
6. Identify overall sustainability opportunities through behavioral and operational changes

Energy and Emissions Findings

2018-2019 Energy Use

Total 2018/19 Building Energy Use by Fuel Type

May 2018 - April 2019 Total Energy Use (kBtu)

Yearly Building Energy Use

FY 2018 Mt Ida GHG Inventory:

Total 2018/19 Building Emissions by Fuel Type

Campus Wide GHG Inventory May 2018-April 2019

FY 2018 Mt Ida GHG Inventory:

Sum CO2e by Month												
	May-18	Jun-18	Jul-18	Aug-18	Sep-18	Oct-18	Nov-18	Dec-18	Jan-19	Feb-19	Mar-19	Apr-19
Electricity (CO2e)	54.1	55.0	62.4	65.9	57.3	56.6	68.2	58.4	62.0	64.5	60.9	52.6
Natural Gas (CO2e)	21.2	6.8	6.7	14.9	59.9	122.0	151.9	172.6	140.7	110.0	54.6	6.4
Number 2 Oil (CO2e)	3.3	0.0	0.0	2.2	4.9	8.1	13.7	10.2	13.3	12.2	5.6	2.3
Sum CO2e (metric tons)	78.6	61.8	69.1	83.1	122.1	186.7	233.7	241.2	216.0	186.6	121.1	61.3

Analysis Tools: Building Atlas

- All-in-one building by building data organization
- Meter numbers, year built, building aliases, generators, mechanical systems, emissions, issues, etc
- Previous upgrades
- Building recommendations
- Future organization and tracking

Full Building List (buildings count as one if they touch)

1	Athletic Center (Main) Hall + Holbrook Hall
2	Applied Science Center (NS) Professional Building/School of Applied Sciences/Quarternary + School of Design/Chamberlaine (chamberlaine) Hall
3	Athletic Center + New Gym
4	Barone Hall (House/Guest House/Dean's House
5	Bealville Farm/President's House
6	Brown Hall (Book/ Brown Hall) + Shaw Hall (Admissions,Event Center) + Wingate(Wingate) Hall
7	Carlson Hall Student Center/Campus Center
8	Chapman Hall
9	Guard House/Gate House
10	Hallden Hall
11	Health Center/Health + Counseling Center/Appleton
12	Health Sciences Building/Academic Technology Center/Community Dental Clinic/Dental Education Center
13	Langfellow Hall
14	Maintenance Shed/Garage/Gar Groom/Adm.dolapta consopu tem aclemp
15	Miller Hall
16	Malloy Hall
17	New Hall
18	Provision
19	Ricker Hall
20	Security/Campus Police/Campus Security/Public Safety
21	West Tech/Center for Veterinary Technology and Science
22	Woodworth Library

Key:
 Brown: Building names refer to the exact same building.
 Blue: Buildings are different sections but connected.
 *Note: buildings touching often have split data or incomplete data, and may or may not supply each other with resources (the building may not be marked in another group that it receives a resource from)

Health and Counseling Center, Appleton

General Information:	
Building Number:	764/21
Year Built:	1920
Building Type:	Office Space, Health + Counseling
Occupied (y/n):	Yes
Square Footage:	3025
Meter Number(s):	2375156
Fuel Type(s):	Oil
Generator:	No
Boiler Upgrade:	No

Building and Energy Planning:

- Building: 2 story, w/ cedar shingle exterior, wood frame and asphalt roof
- Heating: an oil-fired steam boiler
- Cooling: window AC units (building also has dehumidifiers)
- Water, electrical, and nat gas supplied by city of Newton, Nstar, and Nat Grid respectively
- controls are local thermostats
- there is no centralized computer control for heat and AC
- Heating Setpoints: 70 deg F if occupied, 55 deg F if unoccupied
- Garage is converted to a conference room

Notes:

- Moving to where dental clinic was
- Possible renovation planned
- Kristen showed us around
- BASEMENT:
 - Oil tank in good condition
 - New water heater
 - Stone Field Foundation
 - Mice issues
- Mold Problems and possible lead paint

Building Recommendations

Building Prioritization:

Building Priority:

1. TARGET BUILDINGS

- President's House/Boulder Farm
- Chapman Hall
- Veterinary Technology Center

1. Increase Efficiency of Remaining Buildings
2. Buildings with No Future Use

Target Buildings: President's House/Boulder Farm

- Heavy oil use, high emissions
- Poor thermal insulation
- Roof needs replacement
- Stormwater management
- Very low baseline of electricity
- Propane used for cooking

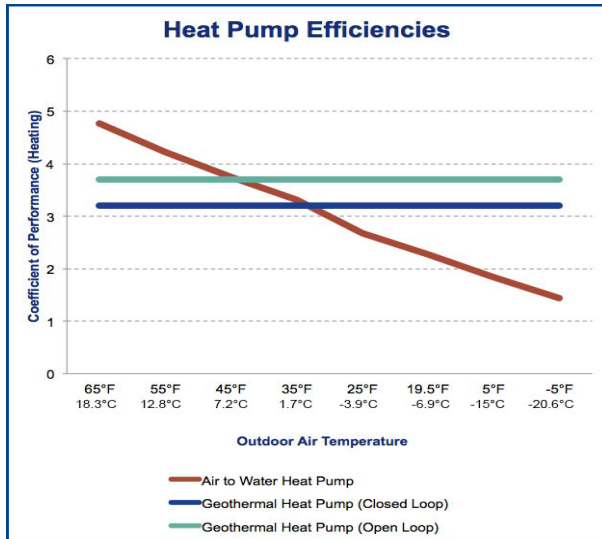

President's House: Recommendations

- New well insulated roof
- Insulate and air seal attic, replace Single pane windows
- Install LEDs and smart plugs
- Replace the boiler with a GSHP

Estimated Heating Improvements for a Ground Source Heat Pump (COP 4)							
Building	Oil Heating Energy Use (kBtu) (2018-2019)	Estimated Operational Savings (kBtu)	CO2e from Oil (metric tons) (2018-2019)	Estimated CO2e from GSHP Electricity (metric tons)	Estimated CO2e Saved (metric tons)	Estimated Percent CO2e Saved for Heating	Estimated Percent CO2e saved for Total Energy
Boulder Farm	267,692	200,769	19.94	5.02	14.92	74.8 %	68.8 %

Table 4.1: Estimated emissions savings by installing a GSHP to provide all of Boulder Farm's heating load.

- GSHPs have a higher avg COP vs ASHPs
- Unaffected by weather
- Greater temperature control
- Integrative, non-intrusive design
- Chimney stove insert

Target Buildings: Chapman Hall

- Small residents hall with no AC
- Only baseboard heating
- Model for conventional building

Chapman Hall: Recommendations

- Install ASHPs
- Air seal and insulate
- LEDs and controls

Target Buildings: Veterinary Technology Center

- Largest energy user on campus
- Lab-type construction and high glazing
- High ventilation requirements

2018/19 VET TECH TOTAL ENERGY USE

■ Electricity ■ Natural Gas

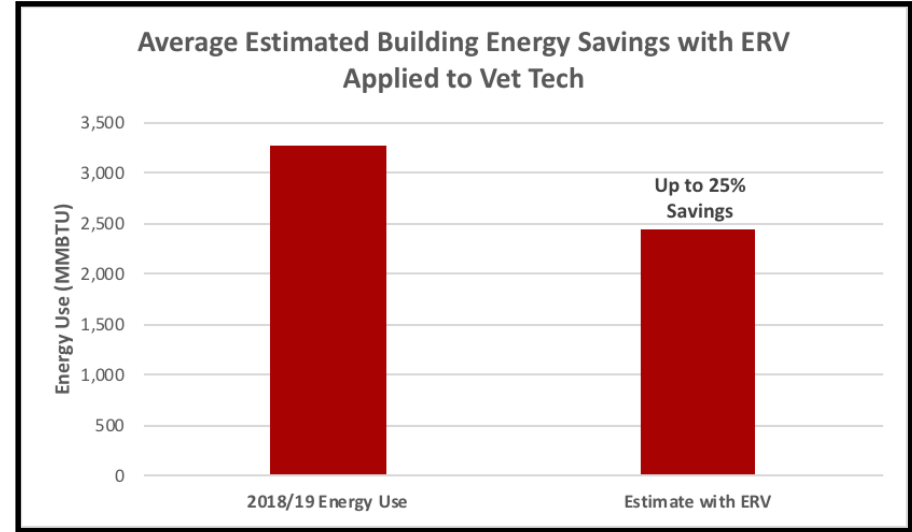

Vet Tech + Gen GHG Inventory 2018-2019

Veterinary Technology Center: Recommendations

Energy Recovery Ventilation:

Target Buildings: Air Source Heat Pumps

Electrifying with ASHPs:

- Estimated avg COP of 2.9 vs .91 efficiency
- Replacing heating systems and adding cooling capability
- Fuel switching to electricity
- Similar emission but potential to be green

Potential Carbon Saving Benefits of Air-Source Heat Pumps						
Building	2018/19 Total Energy Use from Electricity + NG or Oil (kBtu)	Estimated Total Energy Use from ASHPs and Electricity (kBtu)	2018/19 CO2e (metric tons)	Estimated ASHP CO2e (metric tons)	Estimated CO2e Saved (metric tons)	Estimated Percent CO2e Saved
President's	291,924	115,908	21.8	8.7	13.1	60%
Chapman	411,434	190,831	23.5	14.3	9.2	39%
Vet Tech	3,269,692	1,996,968	202.8	149.7	53.1	26%

General Buildings: Recommendations

- Improve Efficiency Through Temperature Control
 - Schedules based on occupancy
 - Set Points for Occupied Buildings:
 - 68 °F to 72 °F for heating, 68 °F to 70 °F for cooling
 - Comfort
- Condemn Oil buildings and Malloy
- Renewable Energy
- BMS: sensors and controls

Calculation of the solar PV energy output of a photovoltaic system

Yellow cell = enter your own data
Green cell = result (do not change the value)
White cell = calculated value (do not change the value)

Global formula : $E = A * r * H * PR$

E = Energy (kWh)	1084133 kWh/an
A = Total solar panel Area (m ²)	6600 m ²
r = solar panel yield (%)	15%
H = Annual average irradiation on tilted panels (shadings not included)*	1461 kWh/m ² .an
PR = Performance ratio, coefficient for losses (range between 0.9 and 0.5, default value = 0.75)	0.75

Total power of the system kWp

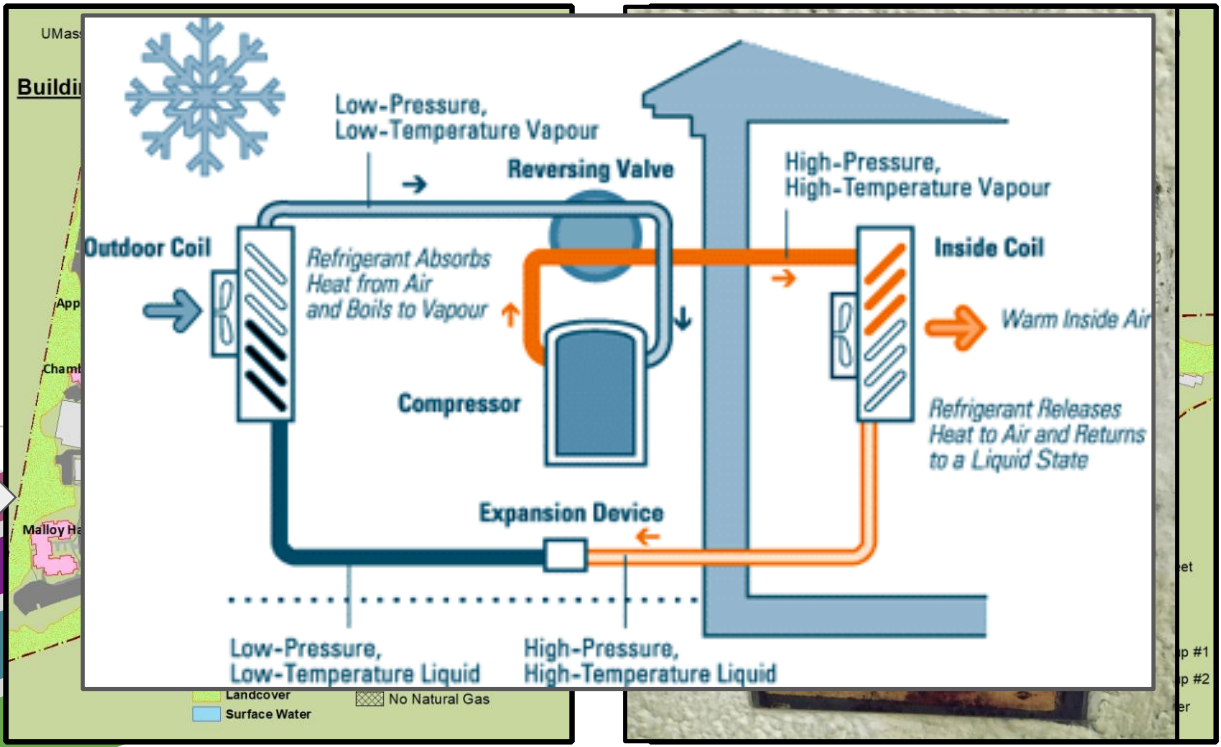

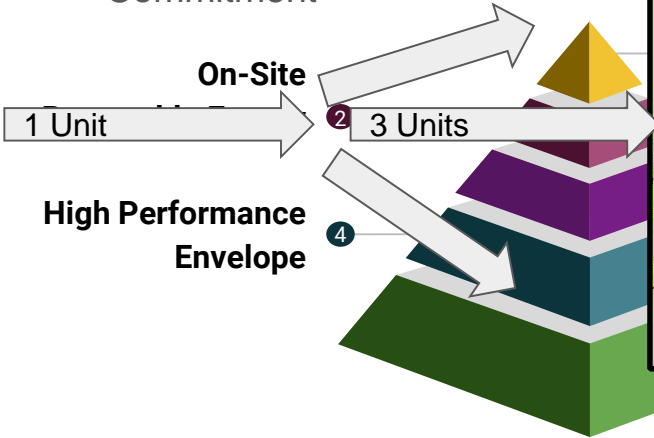

Losses details (depend of site, technology, and sizing of the system)

- Inverter losses (6% to 15 %)	8%
- Temperature losses (5% to 15%)	8%
- DC cables losses (1 to 3 %)	2%
- AC cables losses (1 to 3 %)	2%
- Shadings 0 % to 40% (depends of site)	3%
- Losses weak irradiation 3% yo 7%	3%
- Losses due to dust, snow... (2%)	2%
- Other Losses	0%

Total area: 71,042.33 ft² (6,566.67 m²)
Total distance: 1,379.19 ft (420.38 m)

General Buildings: Recommendations Cont.

- Building Metering
- Electrification: Consider ASHP
 - 100% switch saves ~27% emissions
- Future Building Standards Commitment

A photograph of a university campus during autumn. The scene features a paved walkway leading through a green lawn with scattered fallen leaves. Several people are walking along the path. In the background, there are trees with vibrant yellow and orange foliage, and a modern, multi-story building with large windows. A white text box with a dark border is centered over the image, containing the title.

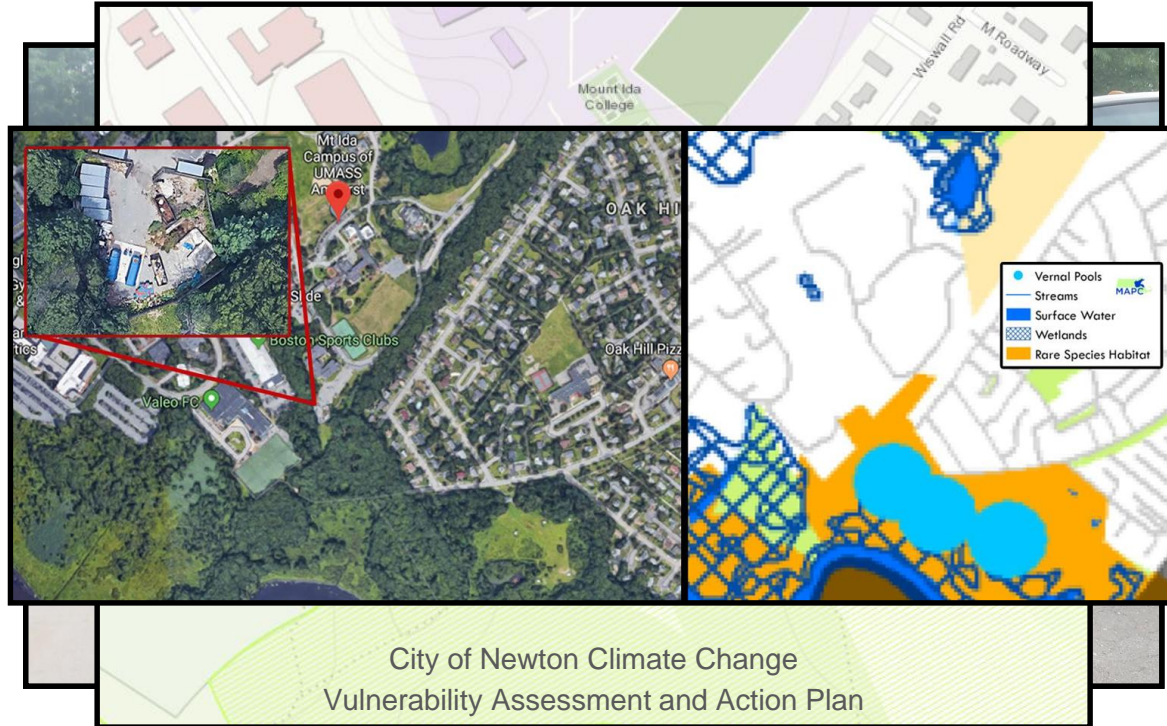

Campus Sustainability Recommendations

Environmental Sustainability:

Environmental Sustainability:

- Rare Species Habitat and Vernal Pools
- Uncovered Road Salt
 - Harm native species (ex. spotted salamander which use vernal pools as their only breeding ground), kill trees, change stream chemistry, and more
- ClogBusters
 - “Stormwater picks up potential pollutants that may include sediment, nutrients, bacteria, pesticides, metals, and petroleum by-products” -U.S. Geological Survey

Environmental Sustainability:

- Inefficient and environmentally harmful outdoor light fixtures across campus
- Poorly sited solar compactors
- Lack of composting

Unacceptable / Discouraged

Fixtures that produce glare and light trespass

Transportation:

- Highlight existing student commuting trends
- Explore opportunities for campus transportation systems
- Investigate the potential for electrification of the campus fleet

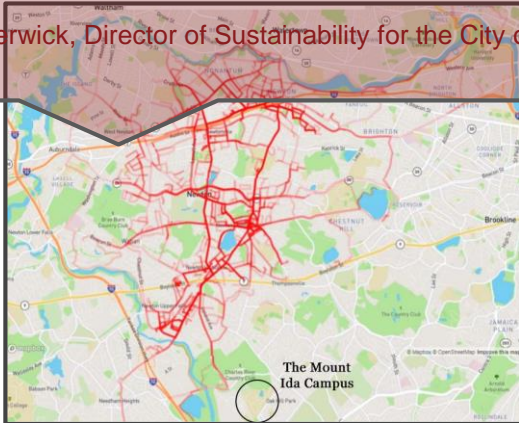

Working with Newton:

“The City of Newton is excited about the opportunities for the Mt. Ida Campus to reduce its greenhouse gas emissions, and for Mt. Ida to serve as a leader in Newton’s anticipated Green Ribbon Commission. We expect that many of Mt. Ida’s “leading by example” initiatives will contribute momentum to the City’s climate programs.”

- Ann Berwick, Director of Sustainability for the City of Newton

- 40% of large commercial buildings in Newton are used for academic purposes
- Green Ribbon Commission
- Align emissions reduction and clean energy goals
 - On-site renewables
 - EV transit
 - High Efficiency Buildings
- Integrate sustainable actions with Newton’s goals and ongoing projects
 - e.g. Limebike bike share

Next Steps:

Action Items:

- Increase Building Efficiency
- Operational/Behavioral Modifications and Retrofits
- Implement Campus-wide Sustainability Measures
- Transform Mt. Ida's Transportation Sector

Future Goals:

- Set future campus specific emissions goals
- Develop detailed HVAC schedules
- Investigate more renewable options
- Retrofit cost analyses
- Further develop transportation plan
- Investigate energy storage

Thank You!
